Carry your next conference to new levels with T-1 High Speed Internet Access.

IBAHN has created a new way of conferencing with high-speed Internet and online services. IBAHN allows you to access the Internet quickly and conveniently in the guest and conference rooms - creating a synergy that until now was not available. The IBAHN system is an easy-to-use, plug and play system that delivers data up to 50 times faster than dial-up modem service to the conference rooms. To use the system, simply plug into the IBAHN box using an Ethernet cable, launch your browser, and you're connected. The system is designed to work with any platform without reconfiguring laptop settings. All you need to access the Internet through IBAHN's high-speed system is your laptop and an Ethernet card - the hotel and IBAHN will supply the rest.

In the conference room

Make conference presentations more dynamic by accessing information directly from the Internet. Even better, give your attendees hands-on experience with individual Internet connections, and share information instantly across platforms. IBAHN offers several connection options to meet your conference needs. Whether you need a single port or multiple secure connections, the hotel can configure your Internet connection at a cost-effective price.

Secure access

You can be confident that attendees will have secure access to the Internet from the conference rooms. With the IBAHN conferencing system, you select the desired level of security for your conference. Regardless of the option you choose, the IBAHN system will allow high-speed access for your conference without compromising security.
